MAHDI NAMEHAVAR

SOFTWARE ENGINEER | AGENTIC AI & MULTI-AGENT SYSTEMS

A software engineer focused on agentic systems.

Türkiye | mahdi.namehavar@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with a background in backend and full-stack development, focused on building reliable, well-structured software systems. Experience spans backend services, APIs, databases, distributed application components, and AI-powered applications using LangChain and LangGraph. Holds a B.Sc. in Applied Mathematics with a minor in Computer Science. Particularly interested in AI agents and multi-agent orchestration, building on strong software engineering foundations to create capable and reliable AI applications.

CORE STRENGTHS **Software Engineering** • **AI Agents** • **Applied Mathematics**

PROFESSIONAL EXPERIENCE

Software Engineer | Classeh | School Management Platform

Full-time · Jun 2025 – Oct 2026 · Remote

- Developed and maintained backend services for an educational platform using NestJS, Node.js, TypeScript, and MongoDB.
- Worked on student grouping, classroom management, accounting, and mass WhatsApp broadcasting; implemented Firebase-based notifications.
- Contributed to a collaborative AI educational assistant built from scratch using LangChain and LangGraph.
- Implemented AI-powered learning assistance and personalized learning roadmaps.
- Developed application modules, controllers, services, dependency injection, DTOs, and validation.
- Applied OOP, SOLID principles, and design patterns; collaborated through pair programming and coordinated development.

Software Engineer | SixRoofs

Full-time · Nov 2023 – Feb 2025 · Canada / Remote

- Developed backend components for real estate applications using Node.js, TypeScript, and Python.
- Built web-scraping workflows to collect property listings and real estate agent information.
- Developed data-processing pipelines to consolidate listing information into structured datasets.
- Implemented automated email workflows and integrated backend services across microservice components.
- Used Docker for application containerization and deployment.

Software Engineer | Freelance

Full-time · Apr 2022 – Nov 2023 · Hybrid

- Designed and developed full-stack web applications for different clients and business requirements.
- Built backend applications and REST APIs using Django, Django REST Framework, and FastAPI.
- Developed frontend interfaces using React and JavaScript.
- Worked with PostgreSQL and MongoDB for data storage.
- Configured deployment environments using Linux, Nginx, Docker, and Docker Compose.
- Delivered client projects including Hanchi, a Japanese food distributor, and Saad Design, an architecture portfolio website.

Software Engineer Intern | Panjere Studio

Full-time · Jul 2021 – Apr 2022 · Remote

- Worked on web development projects using PHP, Laravel, and WordPress, including WordPress functionality and customization.
- Organized code using MVC-inspired principles and applied OOP, SOLID principles, clean code, and design patterns.

CORE CAPABILITIES

Backend & APIs	Python, TypeScript, Node.js, NestJS, Django, FastAPI, REST APIs, full-stack application development
AI Applications	LangChain, LangGraph, LLM integration; focus on AI agents and multi-agent orchestration
Data & Systems	PostgreSQL, MongoDB, MySQL, Kafka, microservices, data pipelines, web scraping, Docker, Linux
Engineering	Software architecture, OOP, SOLID, design patterns, clean code, system design, applied mathematics

MAHDI NAMEHAVAR

SOFTWARE ENGINEER | AGENTIC AI & MULTI-AGENT SYSTEMS

SELECTED PROJECTS

Django–React Social Media Application | GitHub repository

Python · Django REST Framework · React · PostgreSQL · JWT · Pytest

Built a full-stack social application with user authentication, posts, likes, and comments. Developed REST APIs, filtering and limit/offset pagination, JWT authentication, and automated tests for registration, login, and token refresh.

ElegantGlacier — WordPress Utility Library | GitHub repository

PHP · WordPress · Twig

Developed an open-source WordPress utility project integrating Twig templates, reusable helpers around WordPress functions, and lightweight routing to support a more structured development workflow.

Saad Design Website

Django · React · JavaScript · Tailwind CSS · Git · Deployment

Designed and developed a portfolio website for an architecture company, delivering a client-facing web presence and integrating the application components and deployment workflow.

Trade Management Dashboard (PlanX) | GitHub repository

Python · Tkinter · MySQL · KuCoin API

Built a desktop trade-management application with a risk-focused dashboard. Records entry and exit prices, stop-loss and take-profit levels, leverage, and profit/loss; summarizes balance, equity, drawdown, risk limits, risk/reward, and win rate.

Turing Machine Simulator | GitHub repository

Python · Automata Theory · Computational Models

Implemented a simulator for the Turing machine computational model, connecting formal computation concepts from computer science coursework with a working software implementation.

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, PHP, C, C++, Assembly
Backend	Node.js, NestJS, Express.js, Django, Django REST Framework, FastAPI, Flask, Laravel, REST APIs
API & Web	TCP/IP, DNS, HTTP/HTTPS, HTTP/2, REST, JWT, Swagger, validation, pagination, rate limiting, API versioning
Frontend	React, JavaScript, HTML, CSS, jQuery, Bootstrap, Tailwind CSS
Data & Messaging	PostgreSQL, MongoDB, MySQL, SQLite, SQL Server, Apache Kafka
AI & Agents	LangChain, LangGraph, LLM application integration, prompt engineering, AI agents, agentic workflows
Tools & Infrastructure	Linux, Docker, Docker Compose, Nginx, Firebase, Git, GitHub, Postman
Testing	Pytest, Django tests, Selenium
Engineering	Software engineering, OOP, SOLID, clean code, design patterns, modular architecture, system design, microservices, data structures and algorithms
Computer Science	Operating systems, computer networks, network security, computer architecture, databases, automata theory, logic circuits
Mathematics	Applied mathematics, calculus, linear algebra, abstract algebra, mathematical analysis, probability, combinatorics, graph theory, optimization

EDUCATION

B.Sc. Applied Mathematics | University of Zanjan

Sep 2021 – Sep 2026 · Minor in Computer Science

Minor coursework: algorithms, data structures, operating systems, computer architecture, computer networks, databases, and software engineering.

LANGUAGES

Persian: Native / Bilingual

English: Full Professional Proficiency (C1)

German: Elementary (Duolingo 11)

Spanish: Elementary (Duolingo 26)
